

## 01A Skimmers - Oleophilic

### Stone Catcher LST. Connectors: Suction Camlock 3" Female/Male - 395605

The Lamor Stone Catcher is a small box containing a steel grid inside that traps stones and large debris. It acts as a filter for stones and debris larger than the pumps handling capacity.

A mesh screen separates the solids from liquids and can be removed for cleaning. The system is accessed by a sealed top cover with 4 stainless steel clamps.

Camlock couplings are mounted on suction and discharge side according to hose size. To function it merely needs to be connected between the skimmer and the pump.

The Lamor Stone Catcher effectively prolongs the life of the pump by reducing the damage caused by stones.

The Camlock couplings are 3" Female/Male.

#### TECHNICAL SPECIFICATIONS

Length	700 mm	27.6 in
Width	380 mm	15.0 in
Height	360 mm	14.2 in
Weight	13 kg	29 lbs
